

carNAVi informs about Speedlimits

Owning a carNAVi helps users to find their destination without worry and from now on carNAVi can warn the driver in case of overspeeding – display speed limits and other dangerous road conditions.

FOR IMMEDIATE RELEASE

August 8, 2011 – carNAVi is offering affordable and easy to use GPS Navigation Assistants for finding destinations in the Philippines and other countries in South East Asia including Hong Kong, Indonesia, Malaysia, Singapore, Taiwan, Thailand and Vietnam with more countries to come.

The newest innovation contributes to more safety on Philippine roads and highways.

All new carNAVi GPS Navigation Systems contains a **database of speedlimits, dangerous road conditions** like **sharp curves** and **bumpy railway crossings**.

Customers who own already a carNAVi device, can download an update for their systems from the carNAVi website free of charge.

After configuring the warning settings, carNAVi will inform the driver far ahead about speedlimits, radar camera positions and other dangerous situations.

Drivers can choose between visual alerts, like the speed limit will be displayed in the right upper corner of the screen or the system can do voice alerts and then speaks the current speed limit as well. Also users may choose if the alert will only come up if they really overspeed to remind them to slow down!
